DESCRIPTION

Honeywell's Low Temperature Passive Probes, LTP Series, are a modular range of temperature sensors designed for potential use in transportation applications. The LTP Series feature a durable, closed-tip design that maximizes reliability in harsh applications. The sensor's thermistor sensing element effectively senses liquids and gases because of its enhanced sensitivity, accuracy and reliability. Easy-to-install threaded mounting provides reliable operation in harsh environments. Numerous options—from mechanical and electrical interface—simplify installation, allow customers to meet their specific application needs, and facilitate backwards-compatibility with most existing applications.

VALUE TO CUSTOMERS

The LTP Series are designed to meet the customer's need for sensors that are configurable, backwards-compatible, durable, and that reduce total cost of ownership. Their flexible design provides over 2,200 standard configurations with an enhanced response time over a wide operating temperature range.

DIFFERENTIATION

- Seven probe lengths, four NTC thermistor sensor curves, 12 thread options ranging from M10 to M18, 3/4 UNF, and G 1/4, and two hex options
- Zero NRE (non-recurring engineering) costs for configurations
- Reduces cost of ownership due to BOM (bill of materials), engineering, testing, NRE and tooling
- Reduces design costs due to plug-and-play options, backwards integration, flexible offering, customization and non-standard offering
